INTRODUCTION

This edition of the Crash Data Resource Book marks the twenty-first annual report of motor vehicle crashes in Vermont and continues efforts to provide and widely distribute a highway safety resource book as well as historical trends in crashes. Information about the characteristics and dynamics of motor vehicle crashes has proven to be an important element in policy and planning initiatives to make Vermont's highways safer. The latest edition of the Crash Data Resource Book is published on the Governor's Highway Safety Program website at <http://ghsp.vermont.gov> a companion volume, the DUI Statistical Resource Book, is also published on that site. Readers are encouraged to visit the site and download tables in Adobe Acrobat PDF format. The Adobe Acrobat reader is available free at www.adobe.com,

Vermont's crash reporting system underwent major improvements that are fully reflected in this and recent volumes of the Crash Data Resource Book. A significant increase in the number of police reported crashes is evident as reports jumped from 3,258 in 2001 to 10,063 for 2002 and then further increased to 13,716 in 2003 and 13,793 in 2004 and to 14,252 in 2005. The primary reason for increases of this magnitude was implementation of the new Uniform Report of a Motor Vehicle Crash form by the Department of Motor Vehicles (2003 was the first full year of utilization of the new crash form), which has effectively made it easier for law enforcement to collect data and file reports. Extensive training was also carried out as part of the implementation and has resulted in more reports of better quality.

Data used for this report are extracted from the Accident Reporting System (ARS) database developed by the Agency of Transportation. The ARS collects data from police crash reports filed with the Department of Motor Vehicles and adds additional elements not previously available from the previous crash database. It is also important to note that data elements in the ARS are designed to be substantially consistent with the Model Minimum Uniform Crash Codes (MMUCC) developed and adopted by the National Highway Traffic Safety Administration (NHTSA) in 1998. During the past year the Traffic Records Committee, a multi-agency advisory group designed to coordinate improvements to Vermont's highway safety information systems, continued to work hard to improve the Uniform Crash Report Form based on the MMUCC elements, ARS structure, and experience in Vermont.

Readers are advised to carefully review tables in this report, especially those presenting trends from previous years. The large increase in crash reports have created corresponding increases in many of the tables and statistics presented in the following pages.

A highlight of the past years has been development of the architecture for an electronic crash form and system to directly capture data from law enforcement agencies throughout the state. Work on building the system began in January 2005 with implementation initiated in mid-2007. This effort promises to facilitate improved, timely and efficient crash reports, therefore enhancing the quality of data presented here. Traffic citation and criminal charging data from the Vermont District Court and Vermont Judicial Bureau continue to be used as in past editions. All fatal and most injury crashes are included in the ARS data; excluded are property damage crashes involving less than \$1,000.

Secondary data necessary for compiling the various rates and measures used in this report were obtained from the Department of Motor Vehicles (registration, licensed drivers, and aggregate crash report data), Agency of Transportation (ARS interpretations and classifications, vehicle miles traveled), Vermont Center for Justice Research (motor vehicle offense and citation databases), National Highway Traffic Safety Administration (national statistics) and Department of Health (population statistics).

Analysis and report production was conducted by the Vermont Center for Justice Research under a grant from the Vermont Governor's Highway Safety Program and National Highway Traffic Safety Administration.

Requests for further information, or questions pertaining to the data presented in this report should be addressed to:

2009 Crash Highlights

HIGHLIGHTS AND TRENDS

- 12,640 crashes were reported; 68 fatal, 2,321 injury, and 10,251 property damage. (Figure 1.1 and Table 1.1)
- 73 people were killed and 3,144 injured. There were two untimely deaths. (Figure 1.1 and Table 1.3)

ENVIRONMENTAL CHARACTERISTICS

- Crash rates per 1,000 population were highest in Chittenden, Bennington and Windham Counties. (Table 2.1)
- 80.8% of fatal crashes occurred in rural areas whereas more property damage crashes happened in urban (58.2%) rather than rural (41.7%) areas. (Table 2.3)
- 31.4% of the crashes in urban areas occurred at intersections; rural crashes often occur on open road (61.6%). (Table 2.4)
- Crashes were 10 times more likely to occur on state and town roads than on interstate highways. Fatal crashes were somewhat more likely to occur on state and town roadways than interstates. (Table 2.5)
- About 68.8% of all fatal crashes occurred in the 50-65 m.p.h. posted speed ranges. (Table 2.6)
- The holiday period average crash rate per 24 hour period was 33.31 (Table 2.10)
- June and August had the highest percentage of fatal crashes. Whereas, for property damage crashes, a higher number occurred in December, January and February. (Table 2.11)
- Fatal crashes most often occurred on Fridays and Saturdays. (Table 2.12)
- The majority of crashes occurred under either clear (53%) or cloudy (24%) weather conditions with no precipitation. (Table 2.15)
- Most fatal crashes and about 47% of all injury and property crashes occurred on main roads. The next most likely place for a crash was at an intersection. (Table 2.20)

VEHICLE CHARACTERISTICS

- Passenger vehicles were involved in 91% of all crashes reported to police. (Table 3.1)
- 68% of all crashes involved 2 or more vehicles. 56% of fatal crashes involved a single vehicle. (Table 3.3)
- Operator actions, rather than vehicle or roadway conditions, caused almost 8 out of 10 crashes. (Table 3.4)
- Failure to yield, inattention and driving too fast for conditions were the primary operator contributing circumstances for passenger cars, sport utility vehicles and light trucks and van crashes. (Table 3.10)
- Operator contributing circumstances for motorcycle crashes were most often failure to keep in proper lane/off road, driving too fast for conditions, wrong side/wrong way, and following too closely. (Table 3.10)
- 72.3% of crashes involving 3 or more vehicles were rear-end collisions. The most frequently cited manner of crash for two vehicle crashes was also rear-end collisions at 45.9% followed by sideswipe, same direction 17.9%. (Table 3.14)

Person Characteristics

- About equal proportions of licensed drivers were male (49.6%) and female (50.4%), however, crash involved drivers were more likely to be male (55.4%). (Table 4.1)
- Drivers under age 35 were disproportionately involved in crashes, with the highest crash rates found among 16-24 year olds. (Table 4.2)
- There were 467 severe or fatal injuries in 2009. (Table 4.12)
- 92.1% of crash operators reported being restrained; passenger restraint use was 91%. (Table 4.13)
- The highest rates of restraint use were for passengers ages infant-4. Persons ages 13-14 were least likely to use a restraint. (Table 4.14)
- For the five-year period 2005-2009, 96% of children in crashes were using a restraining belt or seat. (Table 4.22)
- About 32% of those killed in motor vehicle crashes were under the age of 40; 64% of the fatalities were male and 36% were female in 2009. (Table 4.24)
- Lamoille County experienced the highest rate of alcohol involved crashes, based on population. The lowest rate was found in Washington County. (Table 4.36)

Citations

- 79,182 citations were written in 2009 (Table 5.1)
- The most frequent violations cited in single vehicle crashes were speeding, driving road laned for traffic, operating no license and operating without insurance. (Table 5.3)
- Speeding continued to be the most frequent traffic citation and accounted for 56.8% of all tickets issued. (Table 5.8)
- Citations issued in Chittenden County comprised about 17% of the statewide total. However, citations issued per vehicle miles traveled were highest in Bennington County (17.2) and Rutland County (16.6). The statewide average was 11.0. (Table 5.9)
- More than 8 out of 10 speeding citations were issued on non-interstate roads. Slightly more than half (52.3%) of the speeding citations were issued on roadways with posted speed limits of 45 mph or less. (Tables 5.10 and 5.11)
- The highest speeding citation rate was for 18 to 20 year olds at 176.5 per 1,000 licensed drivers compared to the average rate of 85.1. (Table 5.12)
- Males are cited for 2 of 3 traffic citations, except for equipment citations which are often issued to commercial carriers. (Table 5.20)

SECTION 1

Highlights and Trends

SECTION 1

Pre-2002 editions of this volume have noted a consistent decline in police reported motor vehicle crashes. However, with the implementation of the new crash reporting system in 2002 police reported crashes increased dramatically. With 2003 being the first full year of utilization of the new crash report, the number of reported crashes rose slightly every year until 2008 when reported crashes decreased to 13,758. In 2009 reported crashes reached their lowest level since the new crash report was introduced, with 12,640 police reported accidents.

Vermont continues to experience a lower incidence of reported crashes and injuries than does the country as a whole. Despite the large increase in reported crashes, the Vermont crash rate of 176 crashes per 100 vehicle miles travels was still below the U.S. rate of 185.

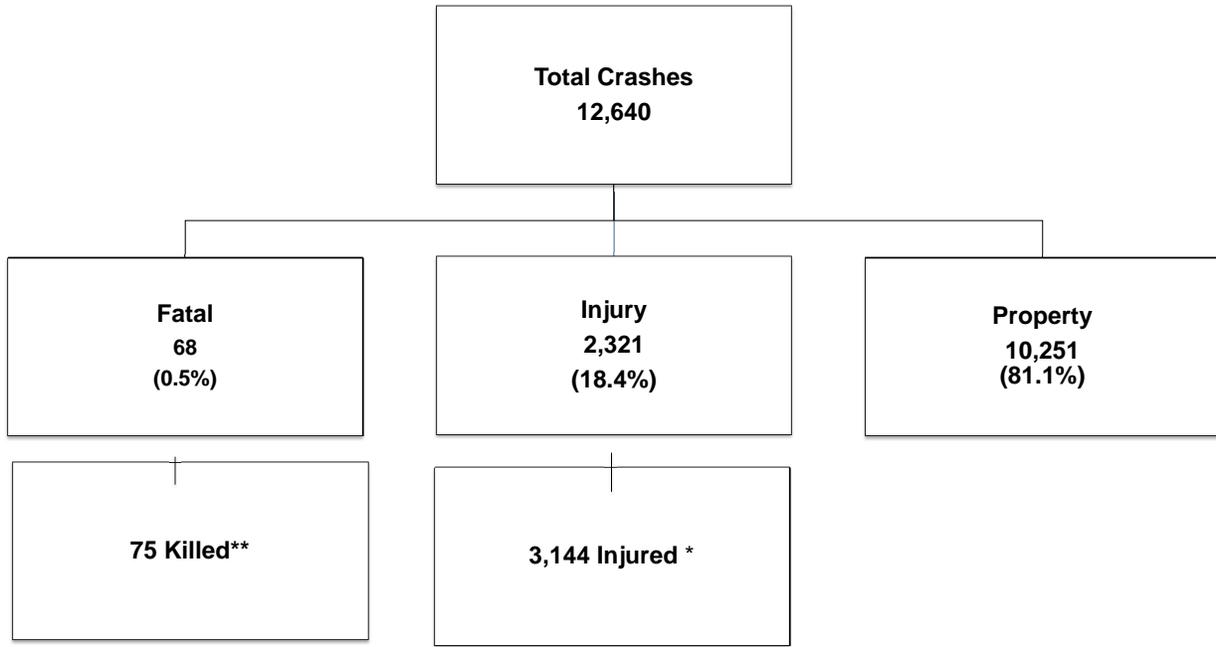

Several important qualifications affect the data provided in this report and should be kept in mind when drawing conclusions about the incidence and characteristics of motor vehicle crashes in Vermont. Most important is that the analysis reported here is based only on crash reports filed by law enforcement with the Vermont Department of Motor Vehicles (DMV) and is, therefore, not reflective of the total number of crashes occurring on Vermont's highways in 2009. It must be noted, however, that police reported crashes generally represent a subset of the more serious property damage crashes, most injury crashes, and a complete accounting of fatal crashes.

Missing from the analyses contained in this and subsequent sections are crashes reported to the Department of Motor Vehicles by operators only. In 2009, there were 3,452 operator reported crashes. A significant statutory change was implemented on July 1, 1995 which increased the level of damage at which an operator is required to report a crash to DMV from \$500 to \$1,000. From 1995-2002, the number of operator reported crashes fluctuated from a low of 7,440 in 2002 to a high of 8,772 in 2000 with the average for these years around 8,000. Since 2003, the operator reported crashes dropped to about half the level for the previous years with an average of about 4,000 reported for 2003, 2004 and 2005. Since 2006, the number of operator reported crashes has been around 3,500 per year.

The proportion of 2009 crashes for which police reports were filed with DMV was 78.5 %; slightly lower than the 2008 level of 80.2 %. It is important to note that in recent years some law enforcement agencies have instituted policies for investigating property damage crashes only when they exceed a higher monetary damage value, most typically \$1,500-\$3,000. Additionally, some departments have eliminated property damage levels as a guiding factor in submitting a police report to the DMV.

There were 73 fatalities on Vermont roadways in 2009 and 2 untimely deaths as a result of motor vehicle accidents. Three thousand one hundred and forty-four people were injured in 2009, a slight decrease from 2008 levels. There were approximately 1,100 fewer reported accidents in 2009 than in 2008. Property crashes had the largest decrease in reported accidents from 11,148 in 2008 to 10,251 in 2009.

**FIGURE 1.1
TOTAL CRASHES 2009
BY CRASH CATEGORY AND NUMBER KILLED AND INJURED**

* Includes persons injured in fatal crashes
** Includes two untimely deaths

TABLE 1.1: CRASHES REPORTED BY POLICE AND OPERATORS, BY TYPE, 2000-2009

POLICE REPORTED CRASHES CRASH TYPE	2000	2001	2002	2003	2004	2005	2006	2007	2008	2009
Fatal	75	83	72	63	84	68	77	64	66	68
Injury	1,892	1,655	2,689	3,086	3,109	2,956	3,048	2,748	2,534	2,321
Property	1,494	1,520	7,302	10,567	10,600	11,228	11,424	11,604	11,158	10,251
TOTAL	3,461	3,258	10,063	13,716	13,793	14,252	14,549	14,416	13,758	12,640
OPERATOR REPORTED CRASHES	8,772	8,128	7,440	3,569	4,333	4,530	3,480	3,590	3,402	3,452
TOTAL REPORTED CRASHES	12,233	11,386	17,503	17,285	18,126	18,782	18,029	18,006	17,160	16,092
Percent Police Reported	28.3	28.6	57.5	79.4	76.1	75.9	80.7	80.1	80.2	78.5

The number of police reported crashes increased in 2009 to 12,640 from the 2008 number of 13,758. Fatal crashes increased from 66 in 2008 to 68 in 2009. Police reported injury crashes decreased from 2,534 in 2008 to 2,321 in 2009 a decrease of about 8.4%. The number of property damage crashes also decreased about 8.1% from the 2008 number of 11,158 to 10,251 in 2009. Crashes reported by operators increased slightly from 3,402 in 2008 to 3,452 in 2009. The proportion of motor vehicle crashes resulting in a police crash report decreased slightly to 78.5% in 2009 from 80.2% in 2008. Crash rates increased in 2002 & 2003 due to the implementation of a new reporting system which increased the number of police reported crashes

Crashes Reported by Police and Operator 2000-2009

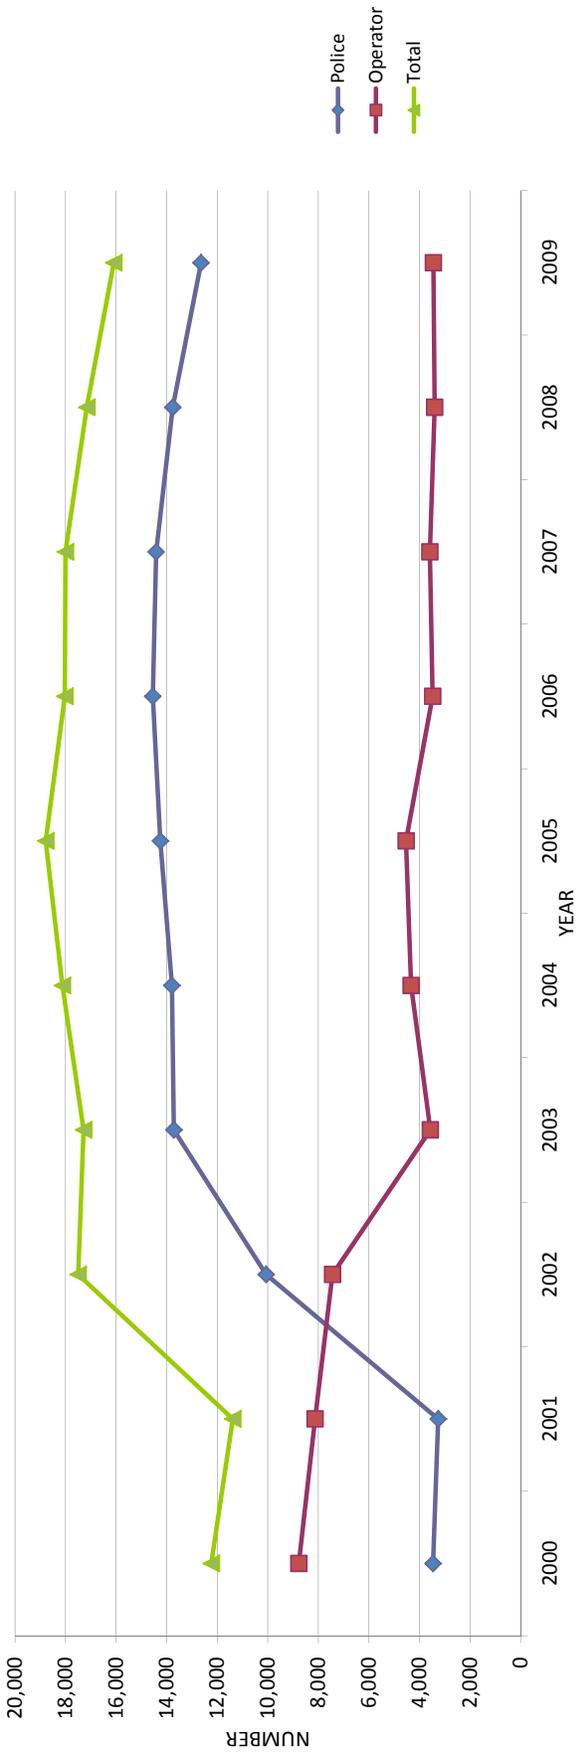

TABLE 1.2: CRASH RATES PER VEHICLE MILES TRAVELED BY TYPE, 2000-2009

CRASH TYPE	2000	2001	2002	2003	2004	2005	2006	2007	2008	2009
Fatal	1	1	0.9	0.8	1.1	0.9	1	0.8	0.9	0.95
Injury	24.1	20.8	34.8	40.5	40.4	38.3	40	36.1	35.3	32.44
Property	19	19.1	94.6	138.8	137.9	145.5	150.1	152.5	155.5	143.3
Total	44.1	41	130.4	180.2	179.4	184.7	191.2	191.7	191.7	176.7

Data sources: Vermont Department of Health Intercensal Population Data; Vermont Department of Motor Vehicles; and Agency of Transportation.

Note: Crash rates increased in 2002 & 2003 due to the implementation of a new crash reporting system which increased the number of police reported crashes.

VERMONT CRASH RATES 2000-2009

Per Various Measures

SECTION 2

Environmental Characteristics

SECTION 2

The three major elements of motor vehicle crashes are environmental and roadway conditions, vehicle characteristics, and operator actions. This section of the report examines the relationship of environmental and roadway conditions to crashes, including weather, road surfaces and types, geographic or political subdivisions, and the distribution of crashes over time.

The analysis presented in this section details the conditions under which Vermont's crashes occurred in 2009. Many of the findings in this report are similar to those in previous years and lend some confidence in our ability to depict crash characteristics from reports filed by law enforcement.

Previous editions of the CRASH report noted that crashes were more likely in urban than rural areas. This trend held true for 2009 with 55% of crashes occurring in urban areas and 45% in rural. Urban area crashes differ from rural crashes in that they are comprised of a smaller proportion of injury crashes (40% vs. 60%), proportionally fewer fatal crashes (19% vs. 81%), and are more likely to occur at intersections (31% vs. 20%). Property damage crashes, on the other hand, are more likely to occur in urban areas (58%) than in rural areas (42%). Overall, relatively few crashes occur on interstate highways (7%) and are more likely to occur on town (23%) or state (43%) roadways. Given increases in monetary thresholds at which local law enforcement report property damage crashes, it is likely that the proportion of property damage crashes occurring in towns and municipalities is somewhat greater than reflected in this report even despite the gains from the new reporting system.

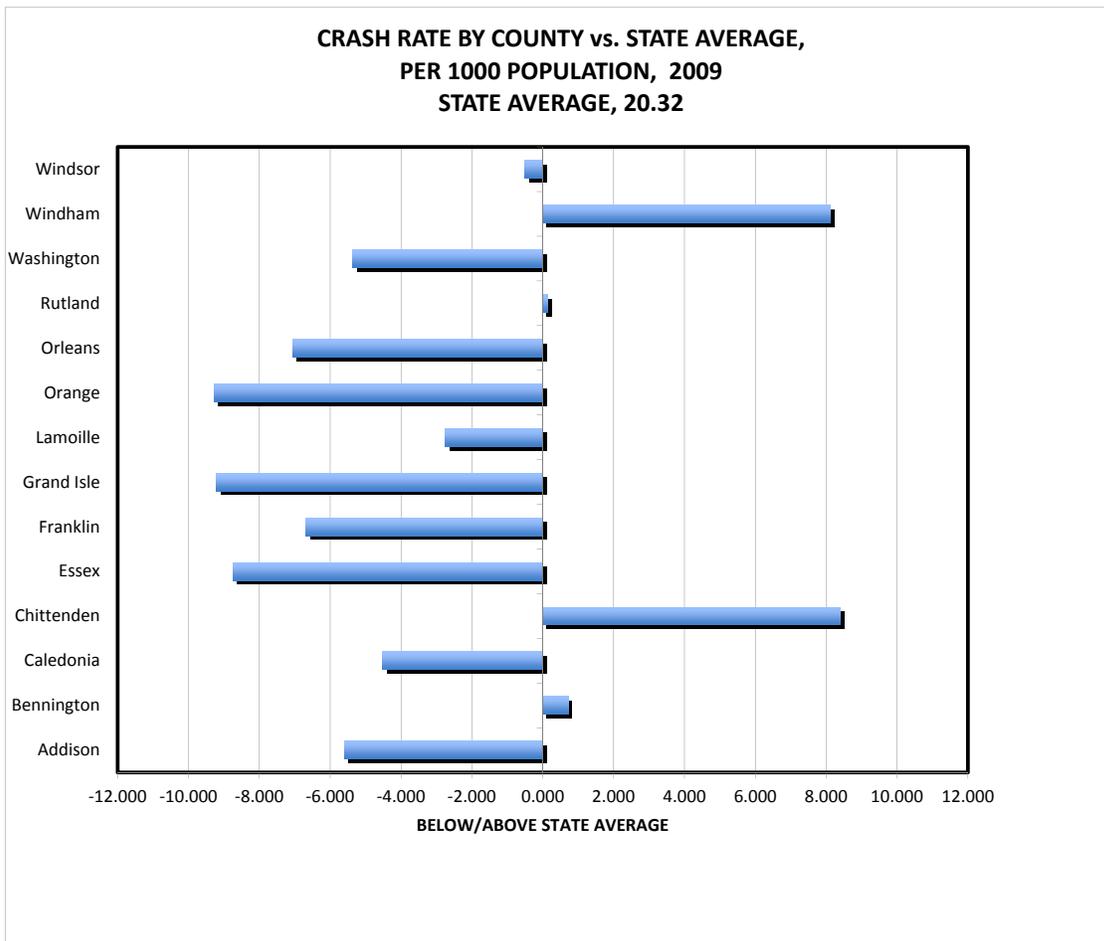

Chittenden County experienced the highest crash rates per 1,000 population, followed by Windham county. Chittenden and Rutland counties exhibited the highest crash rates per 100 million vehicle miles traveled. Grand Isle and Orange counties experienced both the lowest population crash rates and the lowest vehicle miles traveled crash rates of reported crashes in Vermont in 2009.

Construction zone crashes remain a concern for highway safety officials, although it is recognized that identification of such crashes in the crash report data is problematic under current reporting practices. However, the available data indicate that 54 construction zone crashes were reported in 2009. Following too closely, inattention, and disregard of traffic signs were common operator contributing circumstances for construction zone crashes in 2009. Not surprisingly, construction zone crashes occur mainly during week days between 6 AM and 6 PM.

As has been noted in previous reports, the timing of crashes tends to parallel work and leisure time schedules with some seasonal influences. Notably, a higher percentage of fatal crashes occurred on Friday and Saturday and between the hours of 6 a.m.-10 p.m. in 2009. January and December experienced a greater number of crashes than other months. Overall, the rate of crashes occurring on holidays (33.3 per 24 hour period) was lower than the average daily rate in 2009 (34.5 per 24 hour period). Crash rates during the New Year holiday and the Labor Day weekend were the highest of the holidays.

Washington	7	1.05	135	20.34	735	110.72	877	132.11	663.82
Windham	7	1.09	203	31.72	1026	160.30	1236	193.11	640.04
Windsor	4	0.42	256	26.67	861	89.68	1121	116.76	960.05
STATE TOTAL	68	0.95	2321	32.44	10247	143.22	12636	176.61	7154.69

The highest crash rates per vehicle miles traveled in 2009 were found in Chittenden (299.8) and Rutland (202.2) Counties with the lowest rates were found in Orange County (76.9) and Grand Isle (101.4) For fatal crash rates, the highest rate was found in Lamoille County (1.93).

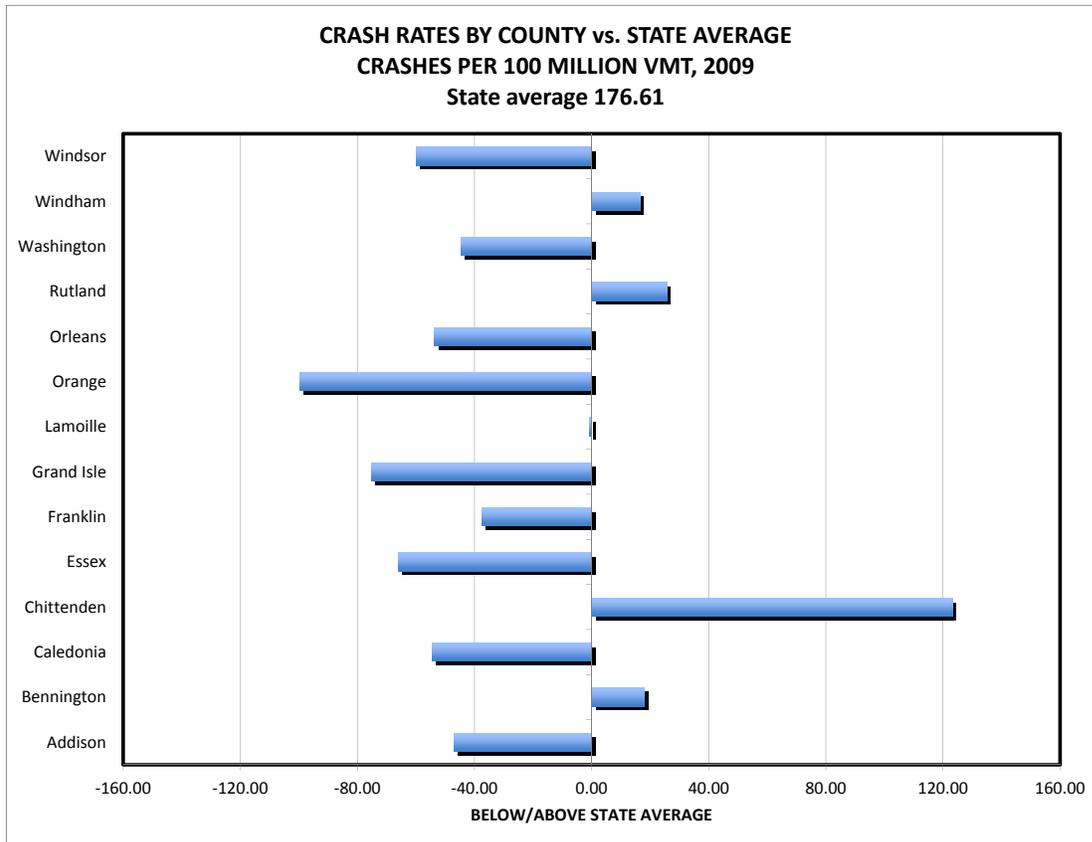

TABLE 2.3: CRASH TYPE BY RURAL VS. URBAN LOCATION, 2009

CRASH TYPE	LOCATION					
	RURAL		URBAN		TOTAL	
	Number	Percent	Number	Percent	Number	Percent
FATAL	55	80.88%	13	19.12%	68	100%
INJURY	1,384	59.63%	937	40.37%	2,321	100%
PROPERTY	4,283	41.78%	5,968	58.22%	10,251	100%
TOTAL	5,722	45.27%	6,918	54.73%	12,640	100%

In 2009, about 80.9% of fatal Vermont crashes occurred in rural areas, while only 19.1% occurred in urban areas. Injury crashes were also higher in rural areas (59.6%) than in urban regions (40.3%) with similar proportions to that found in 2008. Crashes in rural areas were still somewhat more likely to involve an injury or fatality (25%) than were those which occurred in urban areas (14%).

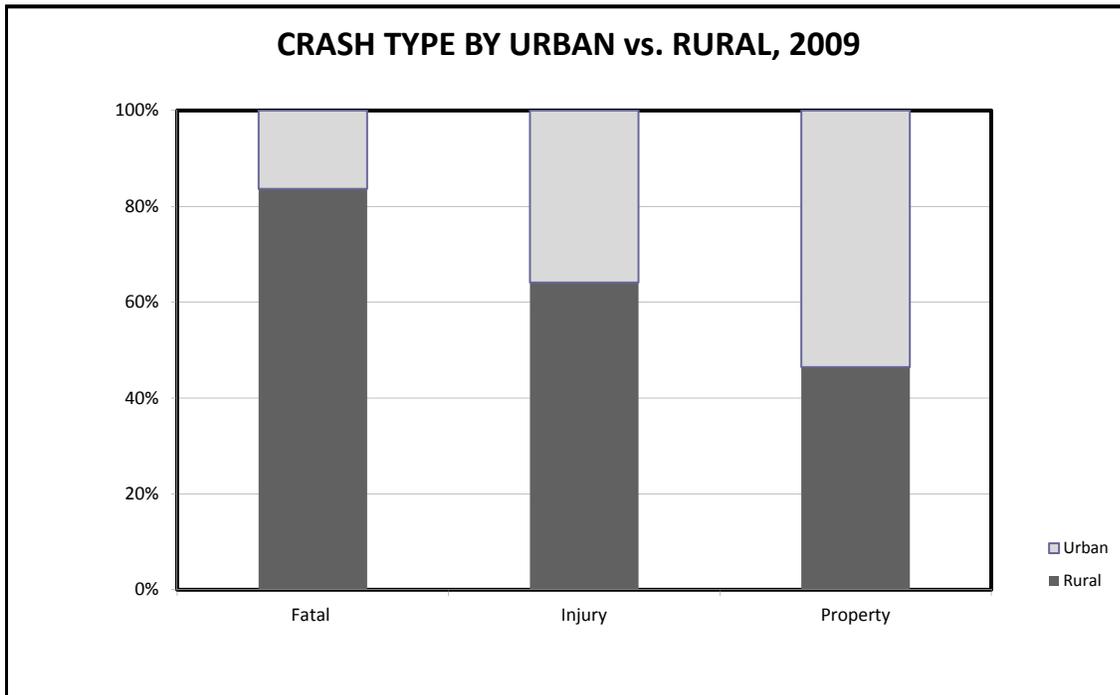

TABLE 2.4: ROAD CHARACTERISTICS OF RURAL VS. URBAN CRASH LOCATION, 2009

ROAD CHARACTERISTIC	LOCATION					
	RURAL		URBAN		TOTAL	
	Number	Percent	Number	Percent	Number	Percent
Intersection with Another Road	1,145	20.4%	2,156	31.4%	3,301	26.4%
Five-point, or more	11	0.2%	21	0.3%	32	0.3%
Railroad Crossing	17	0.3%	6	0.1%	23	0.2%
Driveway	216	3.8%	266	3.9%	482	3.9%
Ramp Off	58	1.0%	77	1.1%	135	1.1%
Ramp On	30	0.5%	23	0.3%	53	0.4%
Open Road	3,461	61.6%	2,426	35.3%	5,887	47.1%
Traffic Circle/Roundabout	2	0.0%	76	1.1%	78	0.6%
Parking Lot	462	8.2%	1,523	22.2%	1,985	15.9%
Other	171	3.0%	239	3.5%	410	3.3%
Unknown/Not Reported	49	0.9%	54	0.8%	103	0.8%
TOTAL	5,622	100.0%	6,867	100.0%	12,489	100.0%

Most crashes, whether urban or rural, occur at an intersection with another road, at a driveway, in a parking lot or on an open road. A higher percent occur on open roads in rural areas (61.6%) compared to urban areas (35.3%) as would be expected. A large percent of crashes in urban regions also happen at intersections (31.4%) and in parking lots (22.2%). About 4% of crashes occur at a driveway.

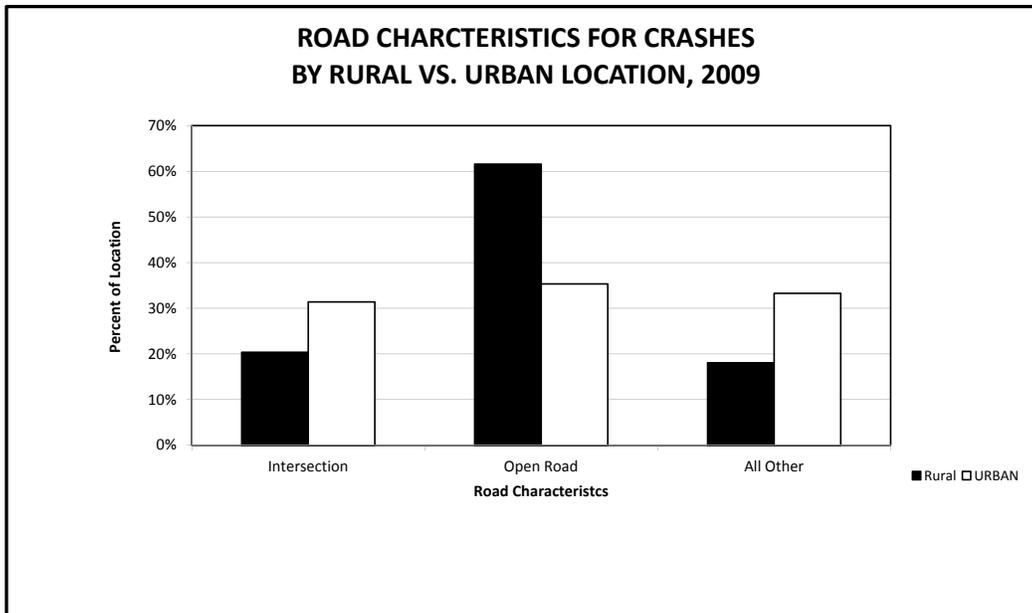

TABLE 2.5: HIGHWAY CLASS BY CRASH TYPE, 2009

HIGHWAY CLASS	CRASH TYPE						TOTAL	
	FATAL		INJURY		PROPERTY			
	NUMBER	%	NUMBER	%	NUMBER	%	NUMBER	%
Interstate	8	11.8%	225	9.7%	602	5.9%	835	6.6%
State	38	55.9%	1183	51.0%	4235	41.3%	5456	43.2%
Town	5	7.4%	547	23.6%	2412	23.5%	2964	23.4%
City/Village	16	23.5%	299	12.9%	899	8.8%	1214	9.6%
Other	1	1.5%	67	2.9%	2103	20.5%	2171	17.2%
TOTAL	68	100.0%	2321	100.0%	10251	100.0%	12640	100.0%

In 2009 crashes were 10 times more likely to occur on state and town roads than on interstate highways. However, fatal crashes were somewhat more likely to occur on state and city roads than on interstate highways.

Year Total	8784	68	0.54%	0.19	2321	18.36%	6.34	10251	81.10%	28.01	12640	100%	34.54

Note: Duration of the holiday period varies by year, holiday, and day of the week. Holiday rates are often affected by weather conditions within the time period, which are not reflected in this table. New Year's includes 24 hours at the beginning of the calendar year and 6 hours at the end of the calendar year. * Rate per 24-hour period.

The 2009 average crash rate during holiday periods (33.31) was lower than the rate for the total year (34.53). Crash rates during Labor Day and New Year's Eve were highest of holidays. The holiday fatal crash rate for 2009 (.24) was higher than the rate in 2008 (.12). The holiday injury crash rate (7.31) was also higher than the 2008 rate of 5.67. The property crash rate during holidays also increased from 23.15 in 2008 to 25.76 in 2009.

Average	5.67		193.417		854.1667		1053.25	
Total	68	100.0%	2321	100.0%	10250	100.0%	12639	100.0%

In 2009, June, August and December experienced the highest percentage of fatal crashes. December experienced the largest number of injury crashes; April the lowest. Injury crash rates during the rest of the months were evenly distributed between approximately 7%-9%. Proportionally more property damage crashes occurred during the winter months of December, January and February.

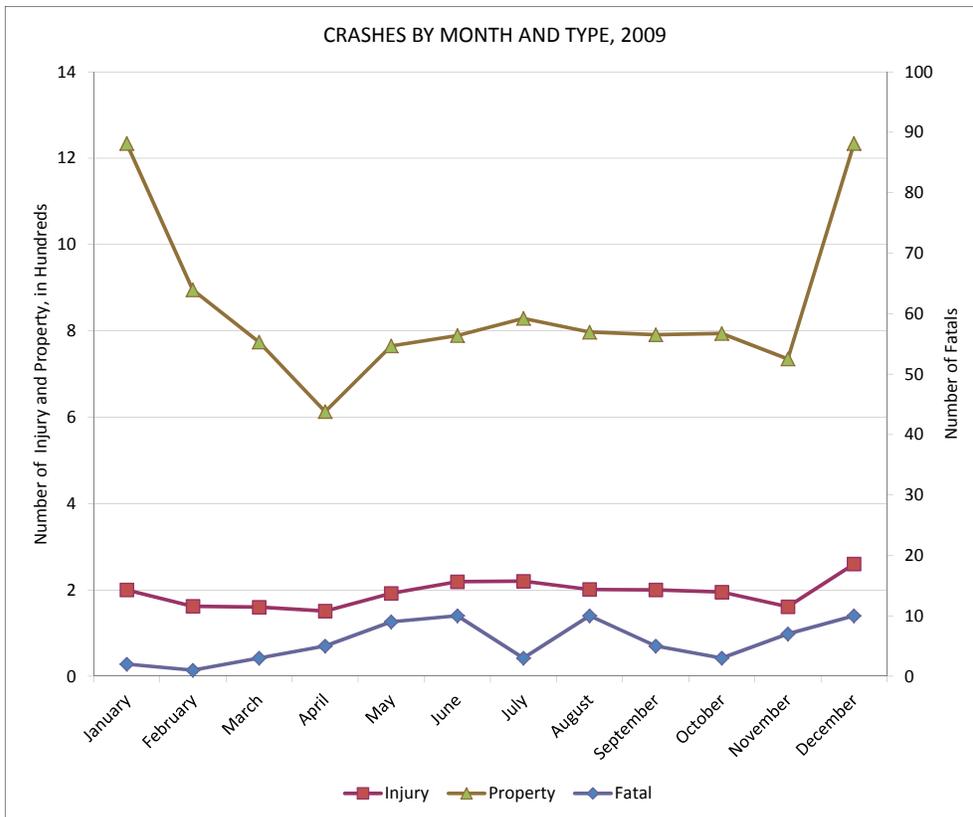

TABLE 2.12: DAY OF WEEK BY CRASH TYPE, 2009

DAY OF WEEK	CRASH TYPE						TOTAL NUMBER PERCENT

Average	9.7		331.6		1464.3		2051.9	

Note: Crashes with unknown data are excluded from the table.

Fatal crashes most often occurred on Fridays and Saturdays (20.6%) in 2009. The highest percentage (15.7%) of injury crashes happened on Mondays, while other days of the week were more evenly distributed. The highest percentage of property damage crashes occurred on Fridays (17.3%), while the lowest was observed on Sundays (10.8%), which has been the case in past years.

SECTION 3

Vehicle Characteristics

SECTION 3

The second major element of motor vehicle crashes is the vehicle. This section of the report examines the crash involvement of various vehicle types, as well as crash causes and dynamics.

The most important finding in this section is that the vast majority of motor vehicle crashes are caused by operator actions rather than vehicle equipment malfunction, roadway or other causes. In 2009, around 77% of all crashes were the result of operator actions, nearly the same proportion found in 2008. Relatively few crashes resulted from equipment malfunction (1%) while more resulted from roadway conditions (23%).

Typical causes for non-fatal crashes in 2009 are similar to those found in previous years and include failure to yield, inattention, following too closely, driving too fast for conditions and failure to keep in proper lane/off road which combined accounted for 72% of operator contributing circumstances. Contributing circumstances of the operator for fatal crashes were most frequently failure to keep in proper lane/off road (54%), failure to yield (7%) and driving too fast for conditions (7%). Also, for fatal crashes hitting another motor vehicle in traffic was a frequent manner of crash at 38% followed by hitting a tree (12%). Close to half (44%) of all injury crashes involved colliding with another motor vehicle in traffic, 24% involved hitting a guard rail/curb, tree, pole/sign, ledge/boulder or other fixed object and 12% overturned.

The number of vehicles involved in crashes varies by the type of crash. In 2009, property damage only crashes involved multiple vehicles 72% of the time, while injury crashes involved multiple vehicles 48% of the time, similar to findings in previous years. Fatal (56%) and injury (52%) crashes were more likely to involve a single vehicle than property damage crashes (28%). Additionally, the most frequent manner of crashes for passenger vehicles in multiple vehicle crashes in 2009 were rear-end (50%) and sideswiping (23%). For non-collision crashes, overturning and hitting a fixed object were a frequent manner of crash for passenger cars, sport utility vehicles, light trucks, or large trucks.

TABLE 3.1: CRASHES BY VEHICLE TYPE, 2009

<u>VEHICLE TYPE</u>	<u>NUMBER OF VEHICLES</u>	<u>PERCENT</u>	<u>NUMBER OF CRASHES *</u>	<u>VEHICLE TYPE PER CRASH</u>

Most crashes caused by operator contributing circumstances occur on roads other than an interstate. In 2009, driving too fast for conditions and failure to keep in proper lane/off road were the most frequently cited causes of crashes on interstates and city/village roads. Failure to yield the right of way, inattention and driving too fast for conditions were the most frequently cited causes on state and town roads.

Failure to yield, inattention and driving too fast for conditions were the primary operator contributing circumstances in the categories of passenger car, sport utility vehicles and light truck or van. Failure to keep in proper lane/off road, driving too fast for conditions and inattention contributed to 42.4% of the crashes involving large trucks. Operator causes for motorcycle crashes were most often driving too fast for conditions, failure to keep in proper lane/off road.

Total	14409	100.0%	1813	100.0%	3522	100.0%	475	100.0%	20219	100.0%

Seventy-five percent of vehicles involved in crashes in 2009 were a model year of 1998 or newer.

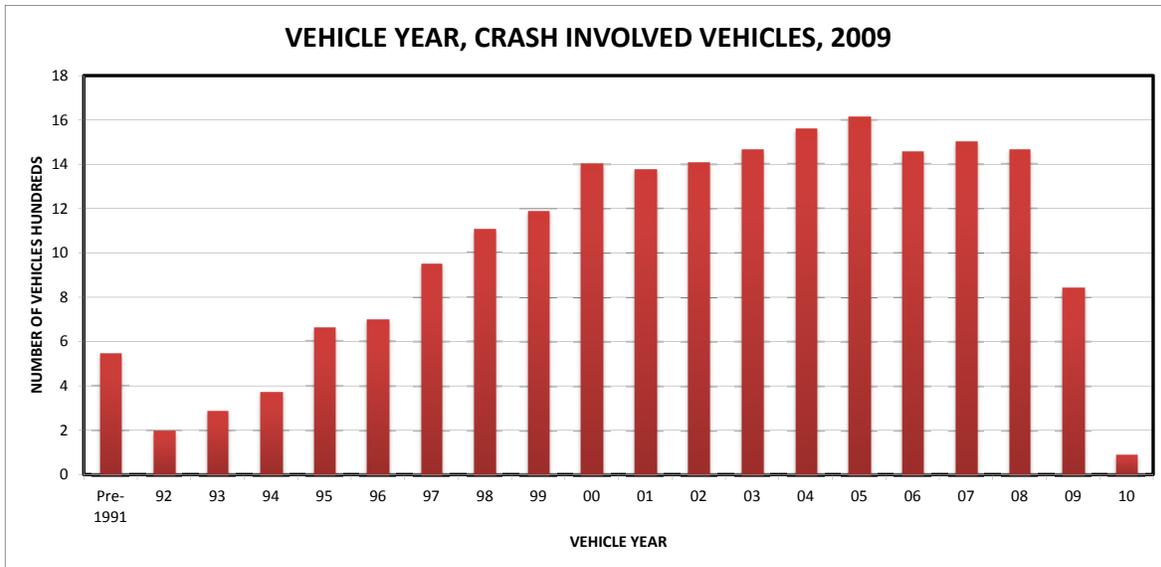

TABLE 3.17: COMMERCIAL VEHICLE BY CRASH TYPE, 2009

VEHICLE TYPE	CRASH TYPE						TOTAL	
	FATAL		INJURY		PROPERTY			
	NUMBER	%	NUMBER	%	NUMBER	%	NUMBER	%
Commercial	5	1.1%	67	14.5%	391	84.4%	463	100.0%
Noncommercial	63	0.5%	2254	18.5%	9860	81.0%	12177	100.0%
TOTAL	68	0.5%	2321	18.4%	10251	81.1%	12640	100.0%

The percent of fatal crashes was higher for commercial vehicles (1.1%) compared to noncommercial vehicles (0.5%), however, proportionally fewer commercial vehicle crashes (14.5%) involved injury than noncommercial vehicle crashes (18.5%)

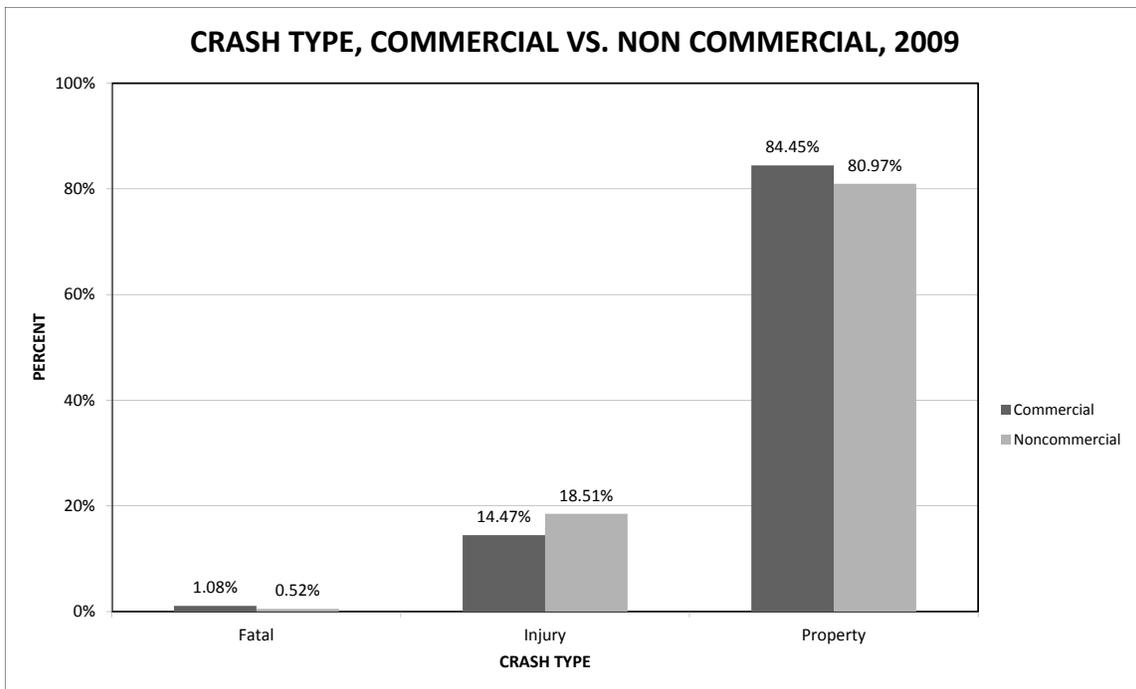

TABLE 3.18: HIGHWAY CLASS BY COMMERCIAL VEHICLE CRASHES, 2009

HIGHWAY CLASS	COMMERCIAL		NONCOMMERCIAL	
	N	Percent	N	Percent
Interstate	53	11.4%	782	6.4%
State	217	46.9%	5239	43.0%
Town	72	15.6%	2892	23.7%
City/Village	46	9.9%	1168	9.6%
Other	75	16.2%	2101	17.2%
TOTAL	463	100.0%	12182	100.0%

Proportionally more commercial vehicle crashes (11.4%) occurred on interstate highways compared to noncommercial vehicle crashes (6.4%) while proportionally more noncommercial vehicle crashes occurred on town and city/village roads (33.3%) than did commercial vehicle crashes (25.5%). A large proportion of both commercial vehicle crashes (46.9%) and noncommercial vehicle crashes (43%) took place on state roadways.

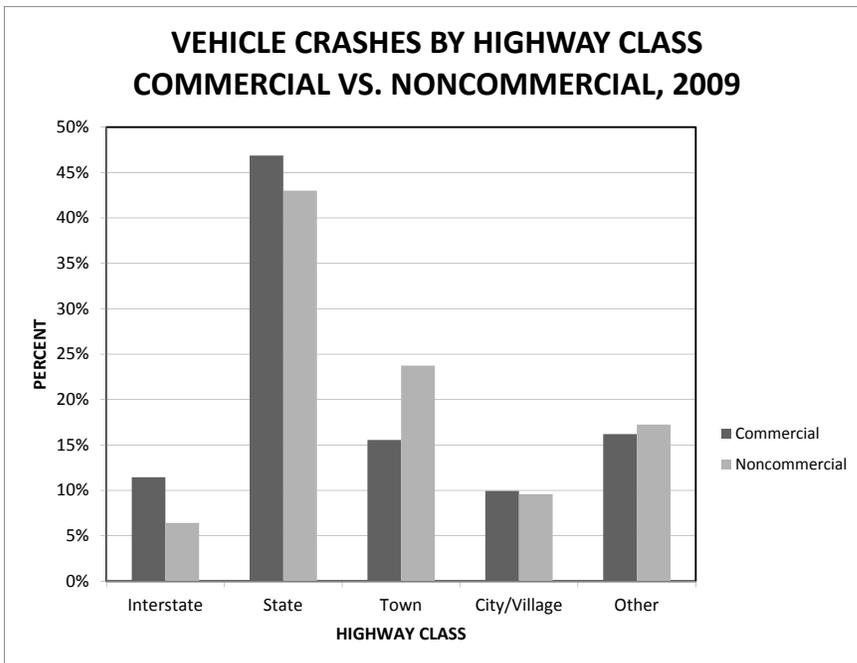

TABLE 3.19: COMMERCIAL VEHICLE OPERATOR CONTRIBUTING CIRCUMSTANCES, 2009

CAUSE	COMMERCIAL		NONCOMMERCIAL	
	N	%	N	%
Driving too fast for conditions	20	7.2%	1490	13.4%
Failure to keep in proper lane/off road	47	17.0%	1275	11.4%
Operating vehicle recklessly	0	0.0%	154	1.4%
Visibility obstructed	17	6.1%	335	3.0%
Excessive speed	0	0.0%	134	1.2%
Following too closely	20	7.2%	976	8.8%
Improper turn	7	2.5%	222	2.0%
Disregarded traffic signs, signals	7	2.5%	162	1.5%
Failure to yield	20	7.2%	1518	13.6%
Inattention	42	15.2%	2359	21.2%
Wrong side or wrong way	1	0.4%	61	0.5%
Fell asleep	5	1.8%	165	1.5%
Under influence of medication/drugs/alcohol	0	0.0%	238	2.1%
Operating defective equipment	8	2.9%	111	1.0%
Distraction caused by technology	0	0.0%	45	0.4%
Distracted	7	2.5%	190	1.7%
Swerving due to wind, slippery surface, etc	4	1.4%	241	2.2%
Other/Unknown	72	26.0%	1474	13.2%
Total	277	100.0%	11150	100.0%

The most frequent causes of crashes for noncommercial vehicles were driving too fast for conditions and inattention while for commercial vehicles the most frequent causes were failure to keep in proper lane/off road and inattention.

COMMERCIAL VEHICLE CRASHES TIME OF DAY BY DAY OF WEEK, 2009

This page is left blank intentionally.

SECTION 4

Person Characteristics

SECTION 4

Among the most important aspects of motor vehicle crashes are the characteristics of persons involved in crashes as either operators, passengers, pedestrians, or bicyclists. This section presents a variety of analyses which examine the relationship of age and sex to motor vehicle crash patterns.

This section of the report details several commonly known demographic relationships experienced in other states and nationally. Data from police reported crashes indicate that drivers age 25-34 and 35-44 accounted for about 26% (13% each) of all crashes, the greatest proportion for all age groups.

A simple distribution of the age of crash involved drivers does not adequately portray the *risk* of crashing for various age groups primarily because almost 85% of all drivers are over the age of 25. Age adjusted crash rates per 1,000 licensed drivers indicate that drivers under 25 years of age had the highest rate of crash involvement of all age groups. Sixteen to twenty year olds were involved in crashes more than twice as likely as would be expected given their number of licensed operators. Conversely, drivers over the age of 45 were significantly less likely to be involved in crashes. Data on vehicle miles traveled by age are not available in Vermont, so crash rates based on mileage and age were not computed.

Younger drivers also pose greater challenges for the highway safety community in several other respects. The highest rates of crashes resulting from driving under the influence of alcohol are found among 18-24 year olds. Additionally, younger drivers and occupants involved in crashes report wearing seat belts less often than older persons. Thirteen and fourteen year olds reported the lowest percentage of seatbelt use, with only 81.6% of occupants in that age group reporting wearing a seatbelt. Adults and children who are not restrained are more likely to be injured.

Another finding consistent with previous years and national data is that crash involved drivers are disproportionately male. While Vermont's licensed drivers are almost evenly split between males and females; about 55% of crash involved drivers were males in 2009. Female passengers accounted for almost 65% of serious injuries and 52% of minor injuries. Males accounted for 74% of the fatalities in 2009.

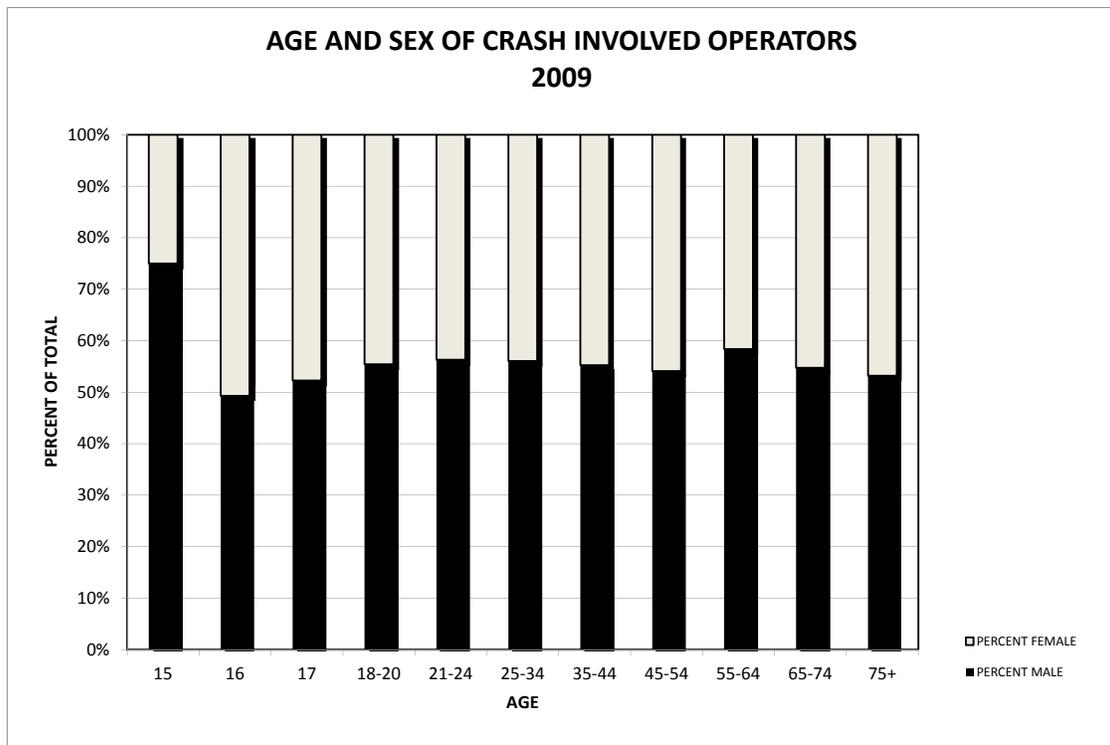

A variety of additional data regarding alcohol involved crashes are presented in this section. There were 726 alcohol related crashes in 2009. There were only 5 DUI cited crashes in 2009, repeating the decline seen in the years 2005-2008.

Pedestrian and bicyclist findings underscore the fact that encounters with motor vehicles often result in injury or death. In 2009, the vast majority (80%) of the 149 pedestrians and 109 bicyclists involved in a motor vehicle crash suffered an injury of some type with 5 pedestrians killed. Almost 35% of pedestrians and bicyclists involved in crashes are age 20 or younger. A large portion of pedestrians (28%), are in the age 50 or above category.

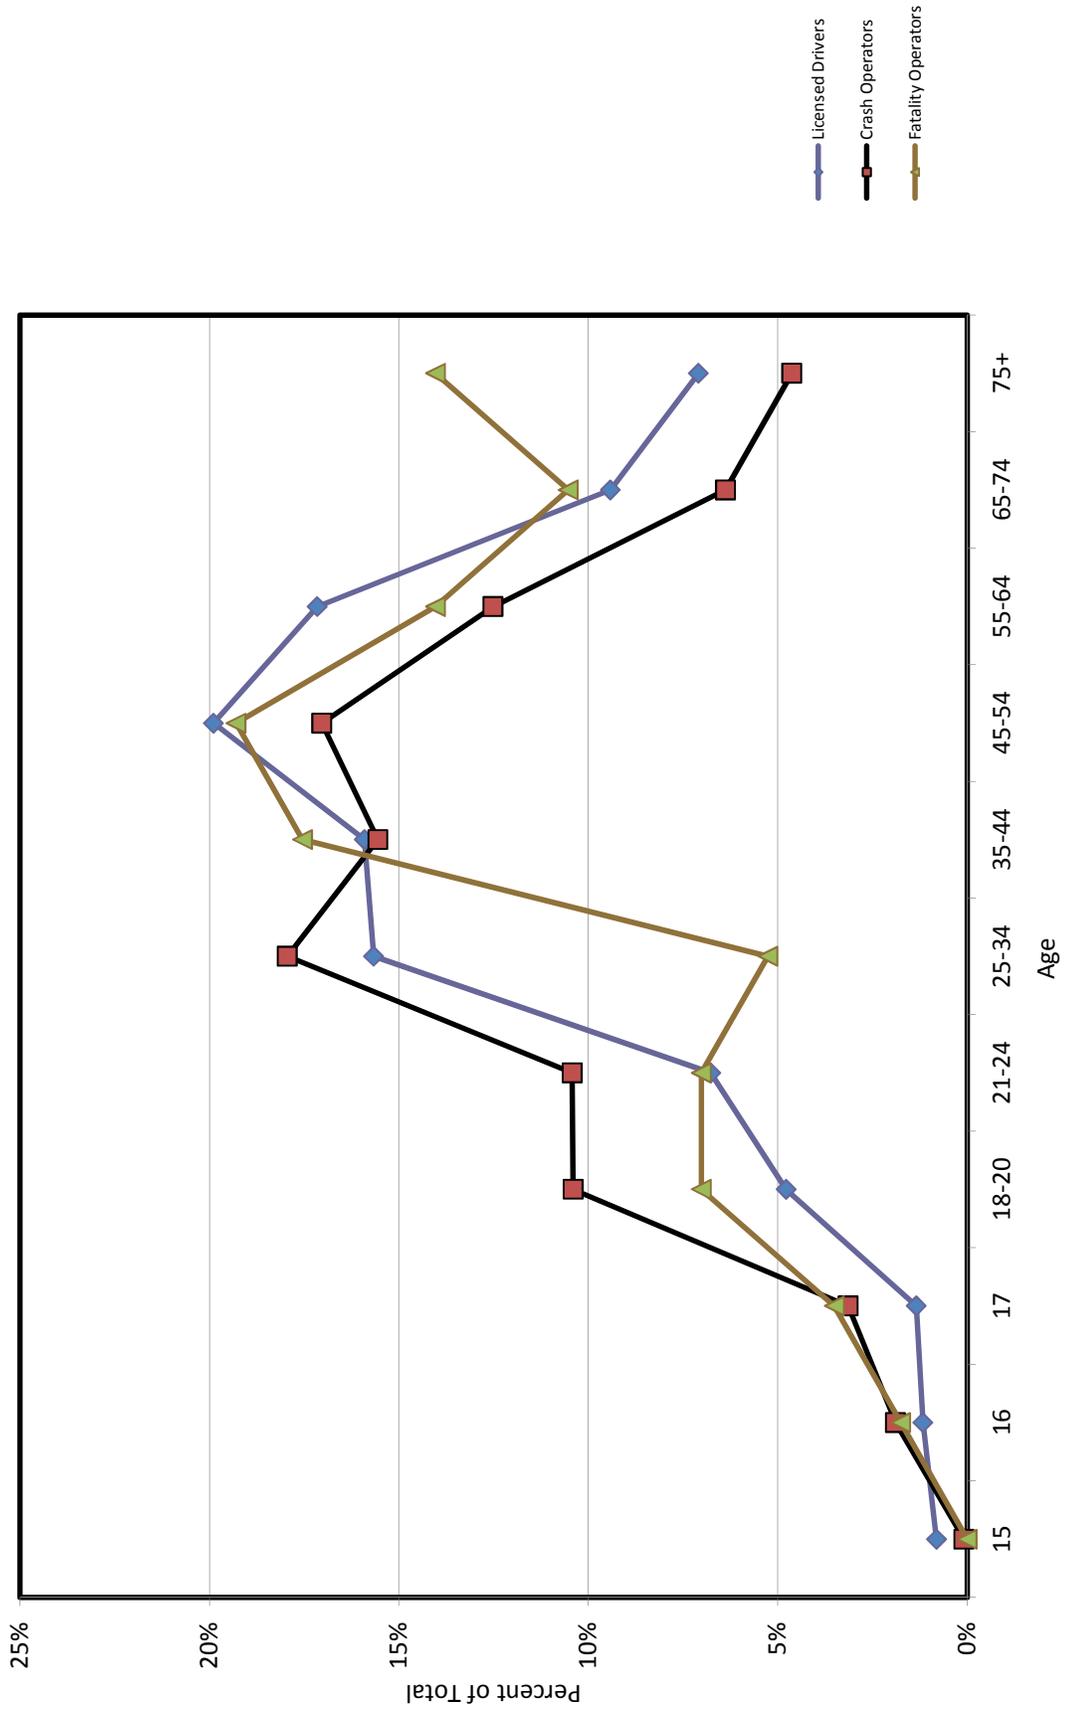

TABLE 4.1: AGE AND SEX OF LICENSED AND CRASH INVOLVED OPERATORS, 2009

Age Group	LICENSED DRIVERS				CRASH INVOLVED OPERATORS			
	Number	Percent Total	Percent Male	Percent Female	Number	Percent Total	Percent Male	Percent Female
15	4,280	0.8%	48.6%	51.4%	16	0.1%	75.0%	25.0%
16	6,161	1.2%	50.7%	49.3%	357	1.9%	49.3%	50.7%
17	7,081	1.3%	50.1%	49.9%	593	3.1%	52.3%	47.7%
18-20	25,167	4.8%	51.1%	48.9%	1,963	10.4%	55.4%	44.6%
21-24	35,656	6.8%	50.7%	49.3%	1,968	10.4%	56.3%	43.7%
25-34	82,512	15.7%	50.1%	49.9%	3,387	17.9%	56.1%	43.9%
35-44	83,770	15.9%	49.8%	50.2%	2,936	15.6%	55.2%	44.8%
45-54	104,785	19.9%	49.4%	50.6%	3,216	17.0%	54.1%	45.9%
55-64	90,355	17.2%	49.9%	50.1%	2,362	12.5%	58.4%	41.6%
65-74	49,581	9.4%	50.1%	49.9%	1,204	6.4%	54.7%	45.3%
75+	37,361	7.1%	45.8%	54.2%	874	4.6%	53.2%	46.8%
TOTAL	526,709	100	49.6%	50.4%	18,876	100	55.4%	44.6%

About equal proportions of licensed drivers are male (49.6%) and female (50.4%). However, crash involved operators are more likely to be male (55.4%). Seventeen to thirty-four year old drivers are over-represented in crashes.

Distribution of Licensed Drivers, Crash & Fatal Involved Drivers, 2009

Distribution of Licensed Drivers and Crash Involvement Rates, 2009

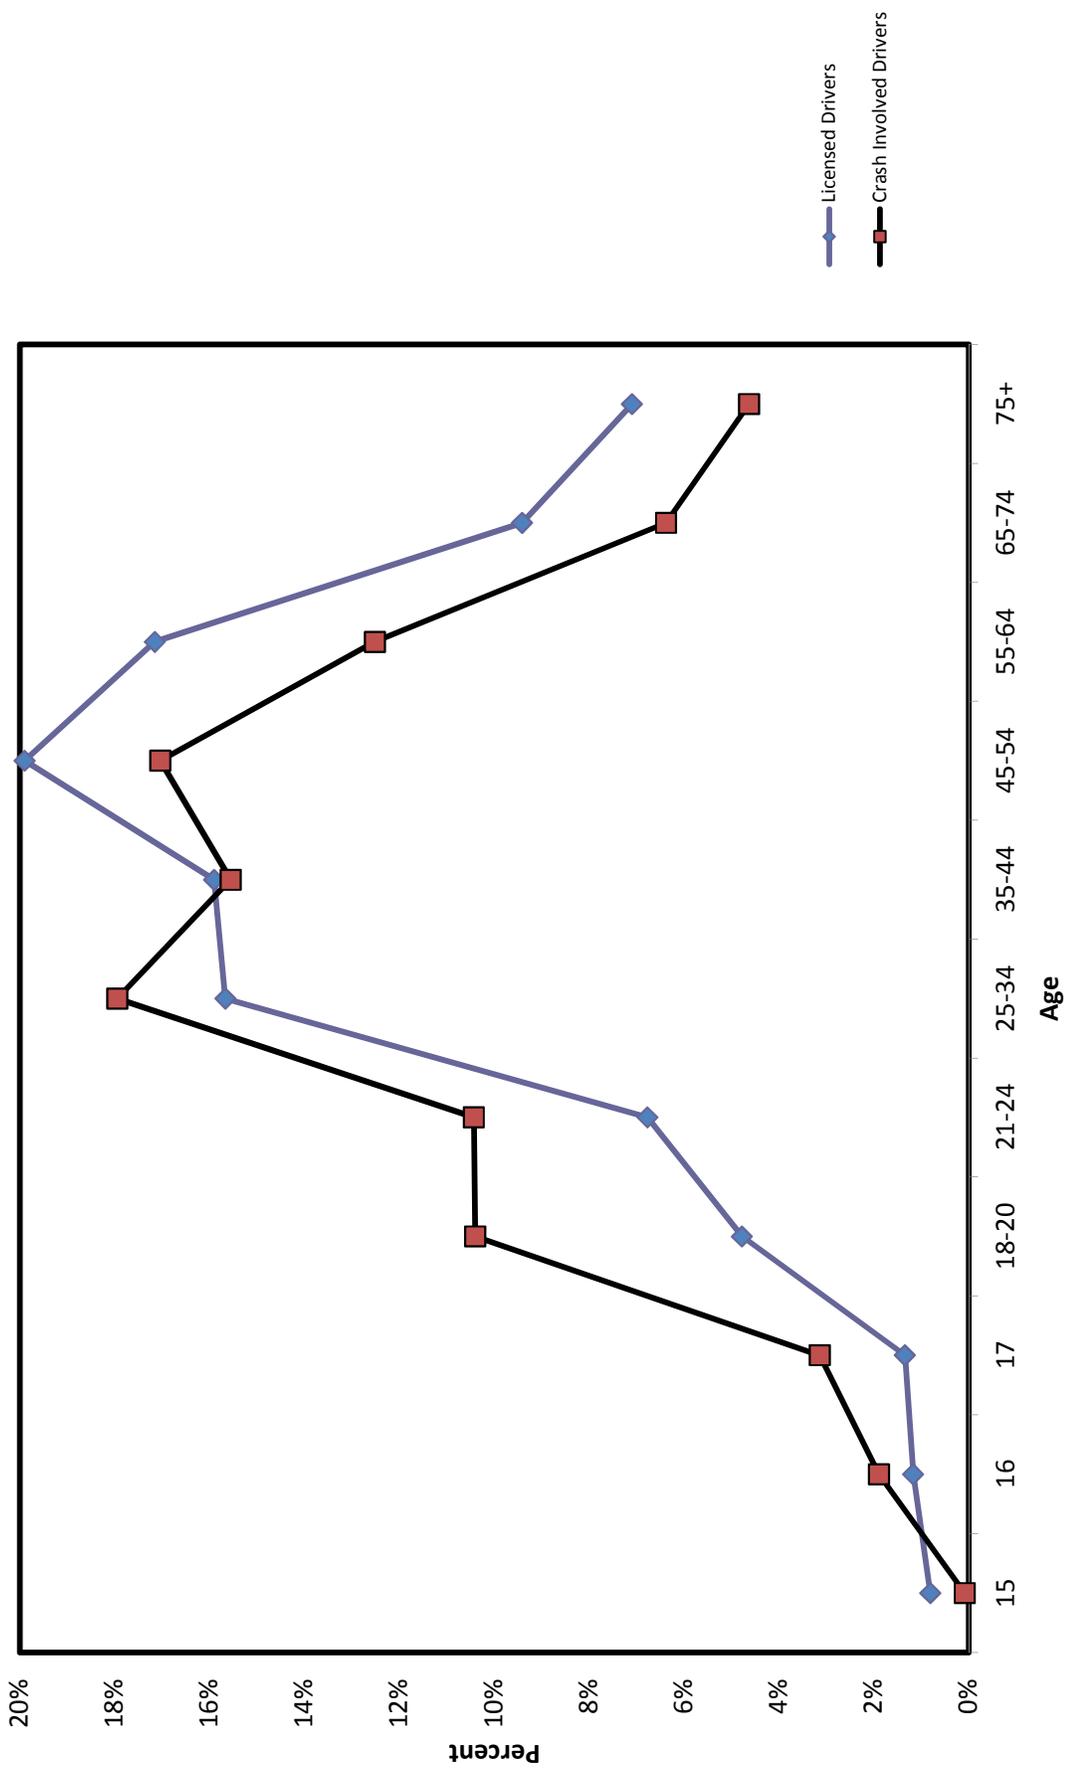

TABLE 4.2: CRASH RATES BY OPERATOR AGE, 2009

Age Group	Population	Licensed Drivers	Crash Operators	Rate* per Population	Rate** per Licenses	Risk Ratio***
15	7,961	4,280	16	2.0	3.7	0.10
16	8,159	6,161	357	43.8	57.9	1.62
17	8,554	7,081	593	69.3	83.7	2.34
18-20	32,467	25,167	1,963	60.5	78.0	2.18
21-24	36,402	35,656	1,968	54.1	55.2	1.54
25-34	69,085	82,512	3,387	49.0	41.0	1.15
35-44	79,499	83,770	2,936	36.9	35.0	0.98
45-54	102,013	104,785	3,216	31.5	30.7	0.86
55-64	86,108	90,355	2,362	27.4	26.1	0.73
65-74	48,267	49,581	1,204	24.9	24.3	0.68
75+	41,644	37,361	874	21.0	23.4	0.65
TOTAL	520,159	526,709	18,876	36.3	35.8	1

*Rate per 1,000 population.
 **Rate per 1,000 licensed drivers.
 ***The risk ratio is calculated as the percent of crash operators in each age category, relative to the percent of all licensed drivers in the age category. A ratio of 1.0 is the expected risk ratio.

Younger drivers have significantly higher crash rates than older drivers, with the highest crash rates found among 17-20 year olds. Drivers under age 35 are disproportionately involved in crashes. Crash rates per 1,000 licenses steadily decline with age and are lowest for older drivers, with the exception of 15 year old drivers.

AIRBAGS DEPLOYED IN CRASHES
1999-2003**

**FIGURE 4.4
MOTORCYCLE HELMET USE AND
SPORT/PICKUP RESTRAINT USE 2005-2009**

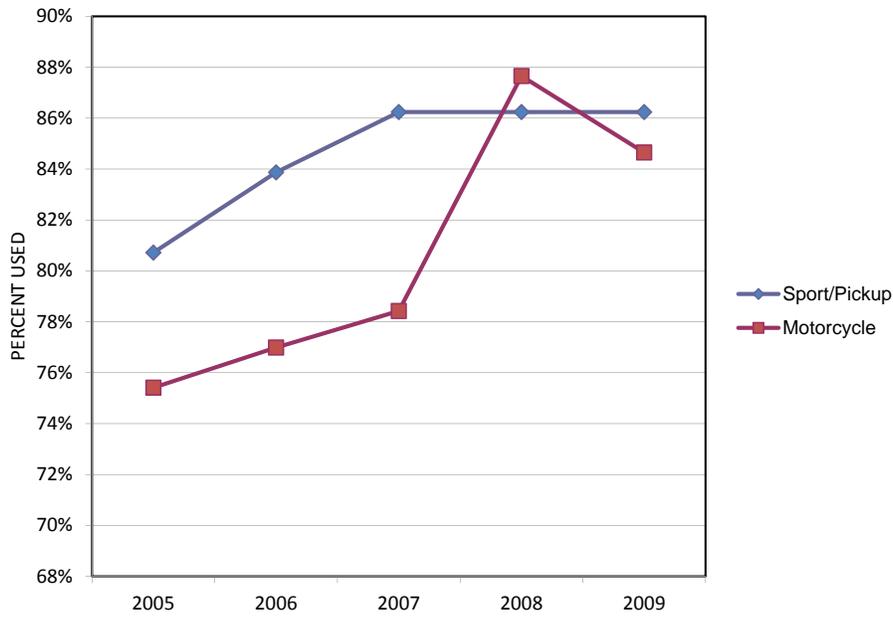

TABLE 4.16: INJURY BY RESTRAINT FOR CRASHES WHERE AIRBAGS DEPLOYED, 2009

Restraint	FATAL		SERIOUS		MINOR*		NONE	
	N	%	N	%	N	%	N	%
Lap Belt Only	0	0.0%	0	0.0%	5	0.9%	0	0.0%
Shoulder Belt Only	0	0.0%	0	0.0%	3	0.5%	3	0.4%
Lap & Shoulder Belts	14	48.3%	86	74.8%	499	88.5%	761	95.2%
No Belts	15	51.7%	29	25.2%	57	10.1%	35	4.4%
TOTAL	29	100.0%	115	100.0%	564	100.0%	799	100.0%

*Note: "minor" includes nonincapacitating and possible injuries.
Unknown injuries are excluded.

The majority of crashes in which air bags deployed and lap and shoulder belts were in use resulted in minor or no injuries. However, the proportion of fatal and serious injury crashes in which lap and shoulder belts were used was relatively high, perhaps reflecting the overall severity of the crash. Almost 91% of persons in crashes where an airbag deployed received minor or no injuries.

12	378	31	7.6%	16.6%
Total	5141	216	4.0%	11.6%

Between 2005-2009 the proportion of children who were unrestrained varied considerably with age. Less than 1% of children 1,2,3 and 4 years old were not restrained, compared to 8% for 12 year olds. Older children continue to have the lowest levels of restraint use for those subject to Vermont's child restraint law.

ALCOHOL INVOLVED CRASHES 2009
BY TYPE OF CRASH

*Includes persons injured in fatal crashes
Chart illustrates crashes identified as those in which the operator had used alcohol.

TABLE 4.39: PEDESTRIANS & BICYCLISTS INVOLVED IN VEHICLE CRASHES BY OPERATOR CONTRIBUTING CIRCUMSTANCES, 2009

CONTRIBUTING CIRCUMSTANCE	PEDESTRIANS		BICYCLISTS	
	NUMBER	PERCENT	NUMBER	PERCENT
Driving too fast for conditions	4	4%	0	0%
Failure to keep in proper lane/off road	4	4%	0	0%
Operating vehicle recklessly	7	8%	0	0%
Visibility obstructed	7	8%	4	6%
Excessive speed	1	1%	0	0%
Following too closely	0	0%	1	1%
Improper turn	0	0%	0	0%
Disregarded traffic signs, signals	1	1%	4	6%
Failure to yield	21	23%	22	31%
Inattention	25	27%	18	26%
Wrong side or wrong way	0	0%	1	1%
Fell asleep	0	0%	0	0%
Under influence of medication/drugs/alcohol	2	2%	1	1%
Operating defective equipment	0	0%	0	0%
Distraction caused by technology	0	0%	1	1%
Distracted	4	4%	0	0%
Swerving due to wind, slippery surface, etc	3	3%	0	0%
Unknown/other	13	14%	18	26%
Total	92	100%	70	100%

Operator contributing circumstances for vehicle crashes where pedestrians were involved were most often inattention and failure to yield. For vehicle crashes involving bicyclists, frequent contributing circumstances of operators were failure to yield the right of way, inattention and visibility obstructed.

TABLE 4.40: PEDESTRIAN & BICYCLIST CONTRIBUTING ACTION IN VEHICLE CRASHES, 2009

PEDESTRIAN/BICYCLIST ACTION	PEDESTRIANS		BICYCLISTS	
	NUMBER	PERCENT	NUMBER	PERCENT
Improper crossing	18	12%	15	13.8%
Darting	9	6%	8	7.3%
Lying and/or illegally in roadway	5	3%	0	0.0%
Failure to yield right of way	3	2%	9	8.3%
Not visible (dark clothing)	7	5%	1	0.9%
Inattention	7	5%	3	2.8%
Failure to obey traffic signs, signals or officer	4	3%	6	5.5%
Wrong side of road	4	3%	6	5.5%
Unknown/other	89	61%	61	56.0%
Total	146	100%	109	100.0%

Contributing action of pedestrians in vehicle crashes where pedestrians were involved were most often improper crossing, darting, inattention and not visible. For vehicle crashes involving bicyclists, bicyclists commonly crossed improperly, darted, or failed to yield right of way.

TABLE 4.41: PEDESTRIANS AND BICYCLISTS INVOLVED IN VEHICLE CRASHES, BY INJURY SEVERITY, 2009

SECTION 5

Citations

SECTION 5

This section of the report includes citation and adjudication data from sources other than police reports of motor vehicle crashes. Data presented here are drawn from the Vermont Judicial Bureau for citations and Vermont District Court for criminal cases. Beginning in 2000 the data extraction process was changed, resulting in an increased number of traffic citations reported for analysis. The purpose of this section is to describe offense patterns and violator characteristics to provide a context for crash data presented in earlier sections of this report and policy relevant information.

Data from the Judicial Bureau indicates that the number of traffic citations issued in 2009 was 79,182, a decrease of about 22% from the 2008 number. There were 8,536 criminal motor vehicle charges disposed in district court, a decrease of 2.6% from the 2008 level. The largest category was Driving with License Suspended at 2,651 or 31.1% of the total charges. DUI-1st followed at 2,516 or 29.5%. In addition, Reckless C & N accounted for 16.6% of the total at 1,419 a decrease of 4.3% from the 2008 level. The total number of convictions for motor vehicle offenses was 6,014, a decrease of 3.7% from 2008.

The descriptive analyses of traffic citations presented in this section indicate that the majority (56.8%) of citations issued are for speeding. The next single largest category (10.1%) is for illegal operator, which includes violations such as operating without a valid license or permit. 18.5% of violations pertain to registration, inspection, insurance, and equipment, with only 5.6% considered other moving violations. Local police departments issued the most citations (36.6%), followed by state police (33.5%), sheriffs (21.6%) and constables (3.9%).

The 2009 data indicate that more than 8 out of 10 speeding citations (82.4%) are issued on non-interstate highways. Moreover, 89.4% of the interstate and 79.3% of the non-interstate speed citations were for speeds exceeding the posted limit by more than 10 miles per hour. The median speed over posted speed limits on non-interstate highways is similar to that on Vermont's interstate highways (16-20 miles per hour). Also worthy of note is that more than half (52.3%) of the speeding citations issued in 2009 (similar to previous years) were on roadways with posted limits of 45 miles per hour or less.

A basic profile of violators is also presented in this section of the report. The most distinctive findings are that 66.4% of persons issued citations are males, and that persons under the age of 30 account for 50% of all violations other than speeding. Persons cited for speeding are slightly older, although slightly more than 4 in 10 (44.9%) are under the age of 35. The modal age category for all violation types in 2009 was 21-24 years old, the same as in 2008. Also of importance is the continued high incidence of speeding citations for 18-20 year old drivers. Although this age group accounted for only 4.8% of all drivers licensed in Vermont, they accounted for 9.9% of all speeding tickets issued and experienced the highest rate of citation at 176.5 per 1,000 licensed drivers (1 in 5.7). In contrast, drivers 35 years and older experienced a speeding citation rate of 67.4 per 1,000 licensed drivers (about 1 in 14).

A variety of DUI data are also presented in this section and indicate patterns similar to those found with traffic citations. Specifically, offenders are more likely to be male (76.8%), and relatively young with a median age of 33.0 years. Approximately 57% of the DUI charges in 2009 were issued to persons between 21 and 39 years of age, a pattern similar to that found in earlier years. A number of reference tables are included in this section to portray DUI adjudication activity in 2009 and previous years.

Finally, the citation data indicate a 50% decrease in the number of child restraint system violations written in 2009. In addition, 100 citations were written for illegally passing a school bus, an increase of 40.8% from the 2008 level. Data on other selected highway safety violations are included in this section and will continue to serve as baseline for assessing safety policy and programs.

TABLE 5.8: TRAFFIC CITATIONS BY TYPE, 2009

Citation	Number	Percent
Speeding	44,996	56.8%
Illegal Operator	7,984	10.1%
Moving Violation	4,430	5.6%
Inspection Violation	4,842	6.1%
No Insurance	4,188	5.3%
Registration Violation	3,225	4.1%
Equipment	2,380	3.0%
All Others	7,137	9.0%
Total	79,182	100%

J:\Tickets\GHSP09\5Ticks09.xls-Tab5_8

Speeding continued to be the most frequent traffic citation issued in 2009, and accounted for 56.8% of all tickets issued. The next largest violation was for illegal operator, which accounted for 10.1% of all violations. Citations for combined illegal operation (e.g. inspection, registration, insurance, equipment) accounted for an additional 18.5% of citations issued. Relatively few citations (5.6%) were for other moving violations, as has been the case in previous years.

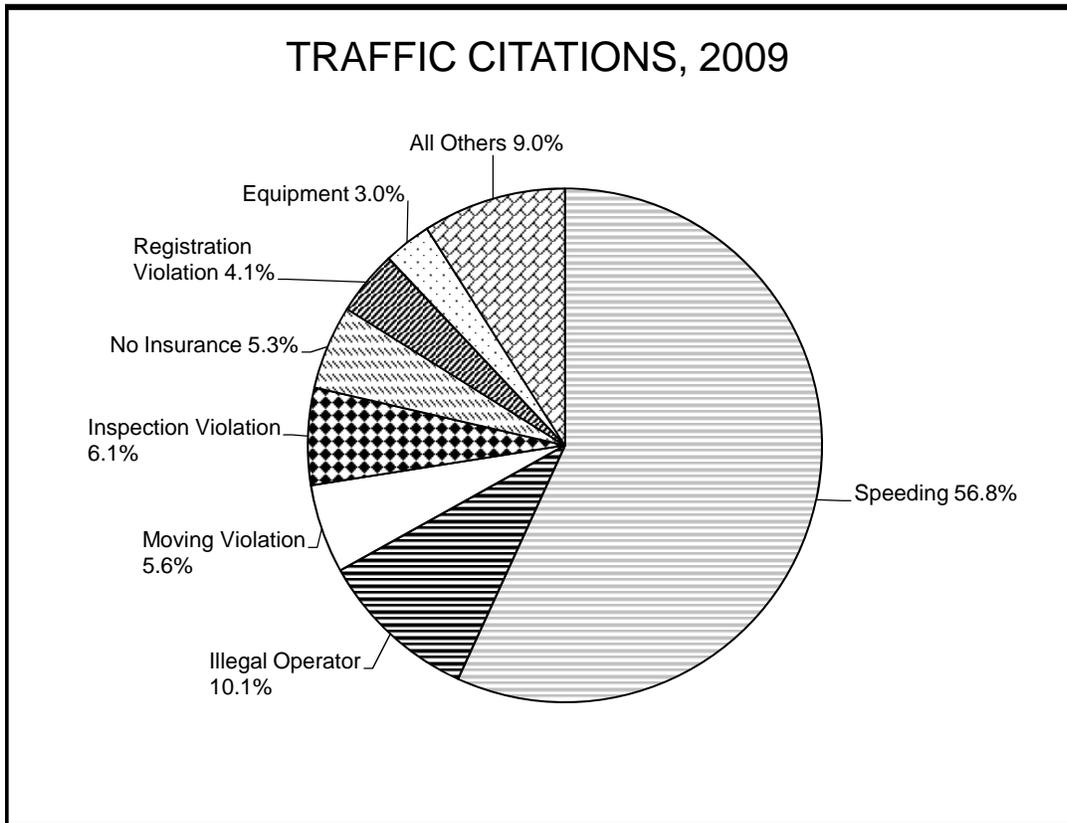

TABLE 5.9: TRAFFIC CITATIONS BY COUNTY, 2009

County	TRAFFIC CITATION										Rate per Million VMT
	Speeding	Illegal Operator	Moving Violation	Inspection Violation	Registration Violation	No Insurance	Equipment Violation	All Others	Total

Note: 833 cases for which the county was unknown were omitted.

J:\Tickets\GHSPO9\5Tickets09.xls-Tab5_9

Citations issued in Chittenden County comprised 17.3 percent of the statewide total, about the same proportion as in previous years. However, Bennington (17.2), Rutland (16.6), and Addison (14.0) experienced the highest number of citations issued per million vehicle miles traveled compared to Chittenden (9.3) and the statewide average of 11.0.

Unknown	380	9.1%	3,797	90.9%	4,177
Total	7,940	17.6%	37,056	82.4%	44,996

J:\Tickets\GHSP09\5Ticks09.xls-Tab5_10

More than 8 out of 10 speeding citations (82.4%) were issued on non-interstate roadways in 2009, about the same as in 2008 (82.1%). The majority of speeding citations issued (65.7%) were for exceeding the posted speed limit by 11-20 miles per hour, while 15.4% were for speeds in excess of 20 miles per hour over the posted speed limit.

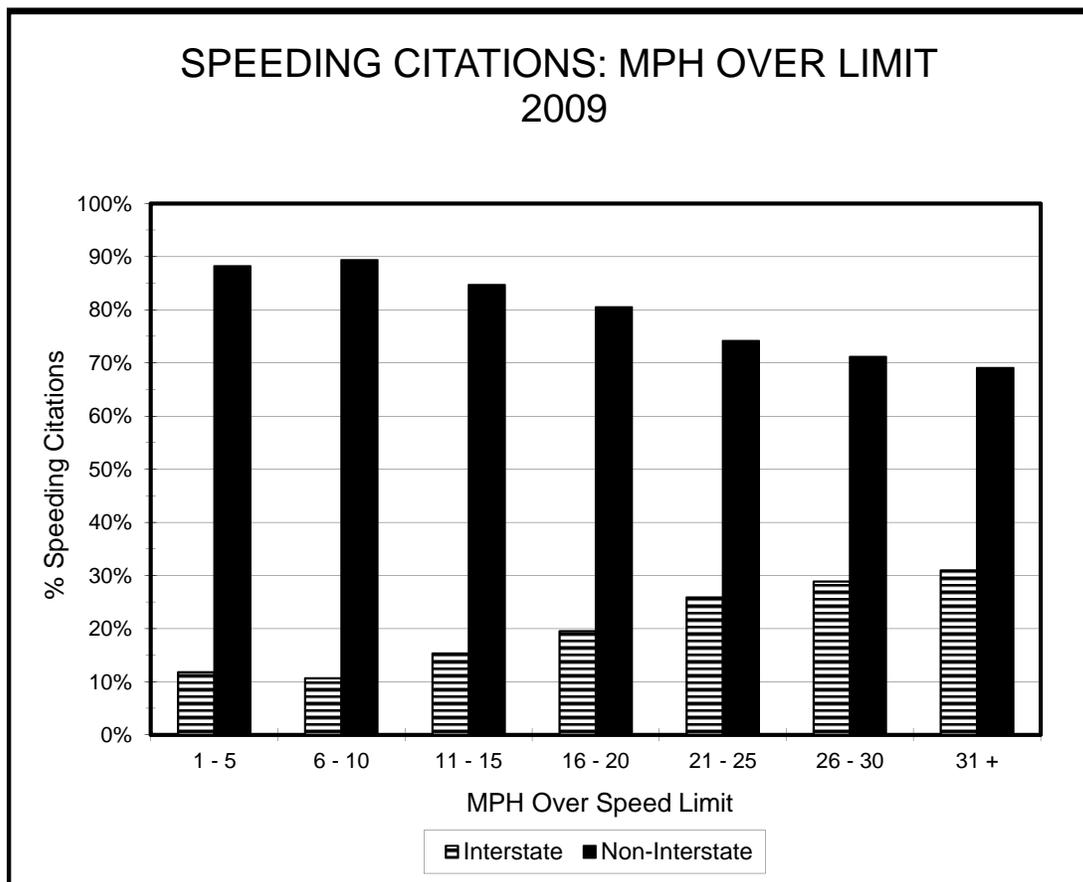

TABLE 5.11: SPEEDING CITATIONS BY POSTED SPEED LIMIT, 2009

Posted Speed Limit	Speeding Citations	
	Number	Percent
< 25 mph	37	0.1%
25 mph	5,975	13.3%

	bicyclist 111, 112	disposition by traffic bureau 155
	blood alcohol percent 97	fine, judgement by license state 156
	child restraint use 88, 89, 143, 154	fine, paid by license state 156
	citations issued 140, 141, 143	fine, total paid by license state 157
	citations, child restraint use 146	highway type 132
	citations, seat belt use 151	license state 138, 139, 156, 157
	crash rates 63, 65	month of issue 135
	crashes, day of week 73	most frequent charged 122
	crashes, time of day 72	motorcycle 94
	DUI charges 123, 128	number of vehicles involved 122
	DUI operator 123	pickup truck 94
	injury, fatality rates 66-69, 91	police agency issue 137, 147, 149
	licensed vs crash-involved 61, 62	rates per VMT 130, 131
	motorcycle 70	safety restraint use 148-154
	operators 61-63, 68-73, 92	seat belt by child restraint 154
	operators, DUI and alcohol involved 96, 123, 128	seat belt citations, by license state 150
	passengers 66, 67, 70, 71	seat belt use 148-154
	pedestrian 111, 112	speeding 129, 130, 152
	pickup truck 71, 82	speeding by posted limit 133
	safety restraint use 82, 143, 154	speeding, by age 134, 141
	seat belt citations 154	speeding, mph over posted speed 132
	speeding citations 134, 141	speeding, rate per licensed drivers 134
	speeding, rate per licensed drivers 134	time of day 136
Airbags		trends 119
	deployed by year 84	type 129
	injury, fatality rates 85	type by age 141, 143
	safety restraint use 85	type by sex 142, 144
Alcohol		vehicle type 93, 94
	and DUI charges 102	Commercial status
	and DUI crashes 96, 98	citations issued 142
	and DUI crashes, charges 95	speeding citations 142
	blood alcohol percent 97	Commercial vehicle crash
	crash rates by county 102	causes 54
	crash rates per population 102	citations 55
	crash rates per VMT 102	highway class 53
	crash type 105	injury, fatality rates 52
	crashes 115	operator contributing circumstances 54
	injury, fatality rates 105	time of day by day of week 56, 57
	operator use 95, 96, 98, 115	type 52
	rate, alcohol crash operators 96, 115	Construction zone
Bicyclist		crash causes 19
	age and sex 111, 112	crashes, day of week 20
	alcohol related crashes 115	crashes, time of day 20
	crash causes 106, 108	County
	crash type 113	alcohol crash rates 102
	crashes 106, 108, 111-116	alcohol related crashes 102
	crashes, day of week 110	citations 130, 131
	crashes, month 110	citations issued 148
	crashes, time of day 109	citations per VMT 130, 131
	fatality 113	citations, child restraint use 145, 146
	injury 113	crash rates by type 13, 14
	injury, fatality rates 107, 113	crash rates per population 13
	lighting condition 114	crash type by town 160-166
	operator contributing circumstances 106, 108	DUI charge rates 102
	weather 108, 116	DUI charges 102, 103, 124
Child		DUI crashes 104
	age and injury 89	injury, fatality rates 90, 104
	restraint, citations by county 145	rates per VMT 14
	restraint, citations by operator age 143	safety restraint use 148
	restraint, citations by operator sex 144	seat belt use 148
	restraint, citations by police agency 147	speeding citations 130
	safety restraint use 88, 89	Crash
	seat belt citations, child restraint use 154	age 64, 65, 67, 69-71, 73
Citations		age and sex 66, 68, 91
	age and sex 140, 151, 154	airbags deployed 85
	by county 130, 131, 146, 148	airbags, deployed by year 84
	child restraint by age, sex 146, 154	alcohol related crashes 115
